BEEF FEED

Concentrate: **Hitech Feedlot 50**
Complete: **Complete Feedlot finisher**

There are 2 feeding options for feedlot cattle:

1. Feeding a concentrate:

100kg Hitech feedlot 50
900kg Grain (Maize or Maize Bran will do)
Ad Lib Roughage (Hay)

2. Feeding Concentrate feed:

Feed 10 kg / animal / day

Please note that it takes 7 days for an animal's rumen (stomach) bacteria to adapt from a high fibre to a high energy ration. This process must not be rushed. The adaptation guidelines below will assist with the changeover.

Day 0 4: 2kg concentrate (complete mix) / animal/ day
Day 5 6: 4kg
Day 7 8: 6kg
Day 9 10: 8kg
Day 11 14: ad lib

The cattle entering the feedlot at 250kg should gain around 1.4kg/animal/d. If they are kept in the feedlot for 3.4 months than the average finished weight should be around 430kg. You can feed the same ratio throughout, either the Hitech feedlot finished feed or the Complete beef finisher.
