SUPREME BROILER FEED

The Supreme Broiler Range has been specially designed for farmers who produce broilers for the slaughtered or live market between 5-6 weeks of age. The rations in this range include a coccidiostat and a growth promoter, for optimal performance.

SUPREME BROILER STARTER

Feed broilers from day old to 14 days of age. The approximate feed consumption for the period is 600g per bird. Crumbles are fed for faster growth and better feed conversion, while mash is fed to the birds to slow down growth and reduce the incidence of ascites/waterbelly.

SUPREME BROILER GROWER

The Grower ration should be fed to Broilers from 15 days to 26 days of age. The approximate feed consumption should be 1.2kg per bird. This ration may be fed through to term but this is not advisable

SUPREME BROILER FINISHER

Broilers from 27 days to 37 days should be fed Finisher. The approximate feed consumption should be 1.30 kgs per bird.

ESTIMATED LIVEWEIGHT AT 35 DAYS SHOULD BE ON AVERAGE 2.3KG
